Why a Chinese Website?

Why an English Website is not enough to communicate with your potential Chinese customers?

- China is a major economic power with high business potential
- The Internet is booming in China and has the largest number of users
- The Chinese Business Community is using actively the internet
- The Chinese language is the most spoken in the world
- The majority of your customers and business contacts do not speak English
- The internet is a major marketing tool in China and the 1st source of searching company information

Your Advantage | Everything in One Hand

We support our customers in all areas of Internet-Communication in China and Asia:

- Web design & Software tools partners
- Professional Translation, Copy Write service & Up-dates
- Domain registration, Web hosting & ICP registration
- Chinese Search Engine Optimization (SEO)

Internet

Your Website | **Everything is Possible**

We are dedicated to present your company and products in the most innovative way, in order to catch the attention of new potential customers. A Website is often the first tool to impress your customers. The information and design should be up-dated regularly to follow the innovation and progress of your company. A simple up-date is not sufficient to differentiate yourself from your competition.

Our experienced team will offer you marketing ideas and technical creativity to create the right internet tool for your company:

- Design and Layout: Flash, static HTML, dynamic content or CMS based (Typo3, ...)
- Shop/E-commerce solutions
- Database technologies

Our objective is to offer you a very competitive package with the highest quality standard. We will address all details with you at the beginning and then complete the design within your lead time requirements. Follow the example of many of our clients and visit our website for more details and reference projects.
